WCAG Basic Viewer Help

Basic instructions for Screen Reader Users

This process works in recent versions of JAWS and NVDA. To perform a search, do the following:

- Press ALT+1 and click the layers button.
- This will send focus to a set of checkboxes for the type of information you are searching for.
- Press tab to move through the checkboxes and use the spacebar to select or deselect the layer you would like to search such as Military Family Resource Centres, Integrated Personnel Support Centres, etc..
- Press ALT +2 to go to the search field. Type in the city or region you would like to search.
- To find out how many results there are. Go to the level 2 Heading called Info Panel and oress the down arrow twice. It will say something such as 1/16 which means first of 16 results
- One result is presented at a time on the page in a little data table. Press "T" in JAWS or NVDA to go to the table and use the JAWS/NVDA table commands (CONTROL+ALT+ARROWS) to the read the results, name, address, phone number etc.
- To read the next result tab twice to the button for "Next Results" and Press Enter.
- Then press SHIFT+T to go back to the result table and read the table with your screen reader table commands
- Continue this process to Tab to previous/next buttons, and Shift+T to go back to the results until you have found the results you choose.

For more screen readers commands

- Navigating with Chrome-Vox: Go Here.
- JAWS Keystrokes: Go Here.
- NVDA Keyboard Shortcuts: Go Here.
